SUMMARY

4th-year Computer Science student with hands-on experience building full-stack web systems, leading 5-member project teams and applying machine learning in a defended thesis. Skilled in Python, JavaScript, React, Node.js and SQL. Seeking an internship where I can contribute to real projects, keep growing as a developer and build user-focused solutions.

PROJECTS

BehavioralGraph: GNN Diabetes-Risk Classification (Thesis, Researcher) **2026**

Python, PyTorch, PyTorch Geometric, scikit-learn, pandas, Google Colab

- **Engineered** a Graph Convolutional Network on a kNN similarity graph of 57,422 Filipino adults (DOST-FNRI survey data) to classify diabetes risk as Low, Moderate or High, producing a physician-validated model (mean rating 3.53 / 4).
- **Benchmarked** the model against 7 ML models using cross-validation and McNemar's tests, achieving an AUC of 0.713, on par with the best-performing models.

NU Laguna e-Registrar System (Backend Developer) **2026**

React, Node.js, Express, MongoDB, JWT, PayMongo

- **Developed** alumni registration, role-protected JWT APIs and request tracking numbers, enabling online requests for 11 document types.
- **Integrated** GCash and Maya payments through the PayMongo sandbox, allowing students and alumni to pay for requests online.
- **Built** admin dashboard metrics and mapped the request-to-release workflow, giving registrar staff a clear view of each request's status.

AskCampus: NLP Student Chatbot (ML / NLP & UI Design) **2026**

Python, scikit-learn, NLTK, Flask, JavaScript

- **Curated** a 38-intent dataset of ~409 student questions and trained a TF-IDF + Linear SVM classifier, reaching 76.8% accuracy.
- **Designed** a multi-turn chat interface and served the model through a Flask API, letting students get campus information in a conversational flow.

Class Efficiency Scheduling System (Team Lead, Full Stack) **2025**

React, Node.js, Express, MySQL

- **Led** a 5-member team in building a scheduler that generates conflict-checked timetables from courses, rooms and sections, delivering a working system with Excel import / export.
- **Implemented** term-based grouping and priority sorting, cutting scheduling conflicts by about 80-90% on a 146-course load.

NUEvents: Event Calendar System (Team Lead, Full Stack) **2025**

PHP, MySQL, JavaScript, HTML, CSS

- **Led** a 5-member team in building a campus event calendar with role-based access by university email, delivering a single platform for posting and joining campus events.
- **Implemented** QR-code tickets and camera-based attendance scanning, replacing manual event check-in.

SKILLS

Data Analysis & ML: SQL, Python (pandas, scikit-learn, PyTorch Geometric), model evaluation, statistical tests
Development: JavaScript, React, Node.js, Express, PHP, Flask, HTML / CSS, MySQL, MongoDB
Tools: Excel, Google Sheets, Git, GitHub, VS Code, Google Colab, Jupyter
Product & Research: User journey mapping, workflow and usability analysis, feature prioritization
Metrics: Engagement, efficiency and performance KPIs; accuracy, F1 and AUC for models

EDUCATION

Bachelor of Science in Computer Science with Honors **Aug 2023 - June 2027**

National University - Laguna · GPA: 3.5

- **Awards & Honors:** First Honor Dean's List (3rd year), Second Honor Dean's List
- **Coursework:** Data Structures & Algorithms, OOP, Database Management Systems, Web Development, Operating Systems, Software Engineering, Discrete Mathematics

Senior High School Diploma (Academic Track: STEM) with Honors **July 2021 - May 2023**

San Beda University - Rizal

- **Awards:** Academic Distinction; Silver Medalist, Research Output; Bronze Medalist, Research Poster
- **Orgs:** Commission on Elections, Senior Plus Red Cross Youth Council (Silver Medal each)
