OBJECTIVE

4th-year Computer Science student seeking a **Junior Product Analyst role** to apply data analysis, machine learning and user-workflow insight to product decisions, backed by two team-lead projects, full-stack systems and a defended thesis on graph neural networks.

EDUCATION

Bachelor of Science major in Computer Science with Honors **Aug 2023 - June 2027**
National University - Laguna · GPA: 3.5

- **Awards & Honors:** First Honor Dean's List (3rd year), Second Honor Dean's List
- **Thesis:** *A GNN-Based Diabetes-Related Classification Model Using Behavioral-Health Similarity Graphs* (defended 2026)
- **Coursework:** Data Structures & Algorithms, OOP, Database Management Systems, Web Development, Operating Systems, Software Engineering, Discrete Mathematics

Senior High School Diploma (Academic Track: STEM) with Honors **July 2021 - May 2023**
San Beda University - Rizal

- **Awards:** Academic Distinction; Silver Medalist, Research Output; Bronze Medalist, Research Poster. **Orgs:** Commission on Elections, Senior Plus Red Cross Youth Council (Silver Medal each)

PROJECTS

BehavioralGraph: GNN Diabetes-Risk Classification (Thesis, Co-researcher) **2026**
Python, PyTorch, PyTorch Geometric, scikit-learn, pandas, Google Colab

- Built a Graph Convolutional Network on a kNN similarity graph of **57,422** Filipino adults (DOST-FNRI survey data) to classify diabetes risk as Low, Moderate or High
- Benchmarked vs. 7 ML models with cross-validation and McNemar's tests: AUC **0.713**, on par with the best models; physician-validated (mean 3.53 / 4)

NU Laguna e-Registrar System (Backend Developer) **2026**
React, Node.js, Express, MongoDB, JWT, PayMongo

- Built alumni registration, role-protected APIs, request tracking numbers and admin dashboard metrics for online requests of 11 document types
- Integrated GCash / Maya payments via the PayMongo sandbox and mapped the request-to-release workflow

AskCampus: NLP Student Chatbot (ML / NLP & UI Design) **2026**
Python, scikit-learn, NLTK, Flask, JavaScript

- Curated a 38-intent dataset (~409 questions) and trained a TF-IDF + Linear SVM classifier with **76.8%** accuracy, served via a Flask API; designed the multi-turn chat interface

Class Efficiency Scheduling System (Team Lead, Full Stack) **2025**
React, Node.js, Express, MySQL

- Led a 5-member team building a scheduler that generates conflict-checked timetables from courses, rooms and sections, with Excel import / export
- Term-based grouping and priority sorting cut conflicts by about **80-90%** on a 146-course load

NUEvents: Event Calendar System (Team Lead, Full Stack) **2025**
PHP, MySQL, JavaScript, HTML, CSS

- Led a 5-member team building a campus event calendar with QR-code tickets, camera-based attendance scanning and role-based access by university email

Other (2025): NU Sports Club Athletes Record System (frontend); Scratch games *Jamie's Curse* and *Enchanted Arrow Strike* (character and visual design)

PRODUCT & ANALYTIC SKILLS

Data Analysis & ML: SQL, Python (pandas, scikit-learn, PyTorch Geometric), model evaluation, statistical tests
Development: JavaScript, React, Node.js, Express, PHP, Flask, HTML / CSS, MySQL, MongoDB
Tools: Excel, Google Sheets, Git, GitHub, VS Code, Google Colab, Jupyter
Product & Research: User journey mapping, workflow and usability analysis, feature prioritization
Metrics: Engagement, efficiency and performance KPIs; accuracy, F1 and AUC for models
